

MEDILINK

Connected Medication Journey

UX Research Synthesis

From fragmented medication experiences
to one connected ecosystem.

DOCTOR

PATIENT

PHARMACY

PHARMACIST

What we learned

The problem is not one feature.
It is a fragmented medication
journey.

PATIENT

Reminders • prescriptions
• availability

DOCTOR

History • prescriptions •
follow-up

PHARMACIST

Availability • orders •
clarification

CAREGIVER

Support • accessibility •
monitoring

Across the research, the same pattern appeared:

Information is scattered

Workflows are disconnected

Follow-up is manual

Pain points by user

01 Patient

Missed doses • lost prescriptions • late refill discovery • unavailable medicine

02 Doctor

Hard-to-access medication history • previous prescriptions • inconsistent information

03 Pharmacist

Unavailable medicines • manual communication • order errors • unclear tracking

04 Caregiver

Needs to support medication management, especially for older or dependent patients

Four common insights

01 Scattered information

Prescription photos, paper notes, medication history and drug details live in different places.

02 Fragmented journey

Doctor → Prescription → Patient → Pharmacy → Dispensing are not one continuous workflow.

03 Availability gap

Patients search for medicine; pharmacists may need to search other pharmacies.

04 Follow-up gap

Dose tracking, remaining quantity, orders and patient follow-up need better organization.

Problem statement

THE CORE PROBLEM

Patients, doctors and pharmacists struggle to organize and follow parts of the medication journey because prescriptions, medication information, availability and communication are fragmented.

This creates

More effort

More room for errors

Harder follow-up

Extra search & communication

Who are we designing for?

PATIENT

Primary

Manage medications,
prescriptions and orders

DOCTOR

Primary

Access history and create
prescriptions

PHARMACIST

Primary

Review prescriptions,
availability and orders

CAREGIVER

Secondary

Support medication
management when
needed

Personas reflect four different contexts — not four separate products.

Current medication journey

Today, the journey looks like a chain of disconnected handoffs.

FRICTION

Information can be lost, duplicated, manually communicated, or discovered too late.

Where MediLink can create value

Connect the journey — not just one feature.

MediLink

One connected medication workflow

MediLink concept

A connected platform for the full medication journey.

Doctor

Prescription + history

Patient

Medication + reminders

Pharmacist

Review + availability

Pharmacy

Orders + stock

Doctor → Patient → Pharmacist → Pharmacy → Medication Management

Feature map

What belongs in V1?

PATIENT

- ✓ Digital Prescription
- ✓ Medication List
- ✓ Reminder + Dose Confirmation
- ✓ Remaining Quantity
- ✓ Prescription Archive
- ✓ Availability
- ✓ Basic Order Tracking

DOCTOR

- ✓ Medication History
- ✓ Previous Prescriptions
- ✓ Digital Prescription
- ✓ Medication Information

PHARMACIST

- ✓ Prescription Review
- ✓ Availability
- ✓ Order Management
- ✓ Medicine Information
- ✓ Basic Communication

MVP user flows

ADD PRESCRIPTION

TAKE MEDICATION

LOW QUANTITY

UNAVAILABLE MEDICINE

When a prescription needs clarification

Goal: replace scattered calls and messages with a traceable workflow.

Value proposition & USP

VALUE PROPOSITION

MediLink helps patients, doctors and pharmacists manage the medication journey more systematically by connecting prescriptions, medication information, follow-up, availability and orders in one experience.

USP

MediLink focuses on connecting the medication journey between doctor, patient, pharmacist and pharmacy — instead of treating each stage as a separate service.

AI — SUPPORT, NOT DECISION

Organize prescriptions • structure medication schedules • explain information clearly • suggest organization.

SAFETY BOUNDARY

No diagnosis • no prescribing • no dosage changes • no replacing clinical decisions.

MediLink = Connected Medication Journey

Not just a pharmacy app.
Not just a medication reminder.
A connected journey across the medication ecosystem.
